The cosine function

Anna Poelz

June 5, 2020

The cosine function can be defined through the differential equation

$$y''(x) = -y(x) \tag{1}$$

with the boundary conditions

$$y(0) = 1, y'(0) = 0. (2)$$

"out.txt"

The result was obtained using ode.rk23, a Runge-Kutta ODE-solver provided by D.V.Fedorov.
